

2011-2013 Scion tC Trunk Light Replacement

How to replace the trunk lights in the rear of the 2011-2013 Scion tC.

Written By: Nick d'Alencon

TOOLS:

- [iFixit Opening Tools](#) (1)

PARTS:

- [Dome light replacement bulb](#) (1)

Step 1 — Trunk Light

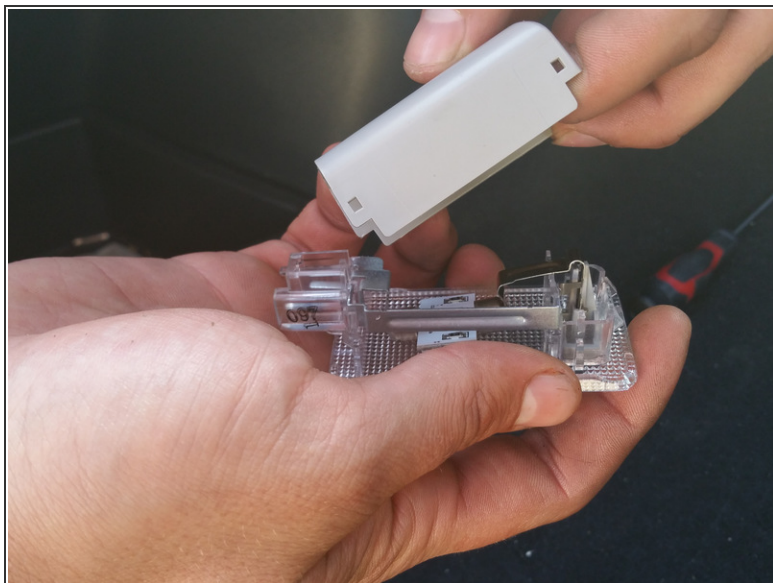

- Remove clear plastic housing using a pry tool.

Step 2

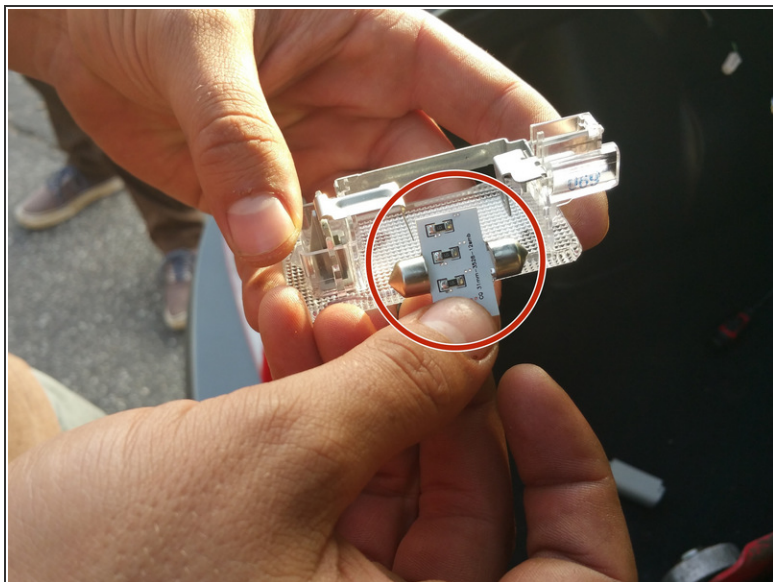

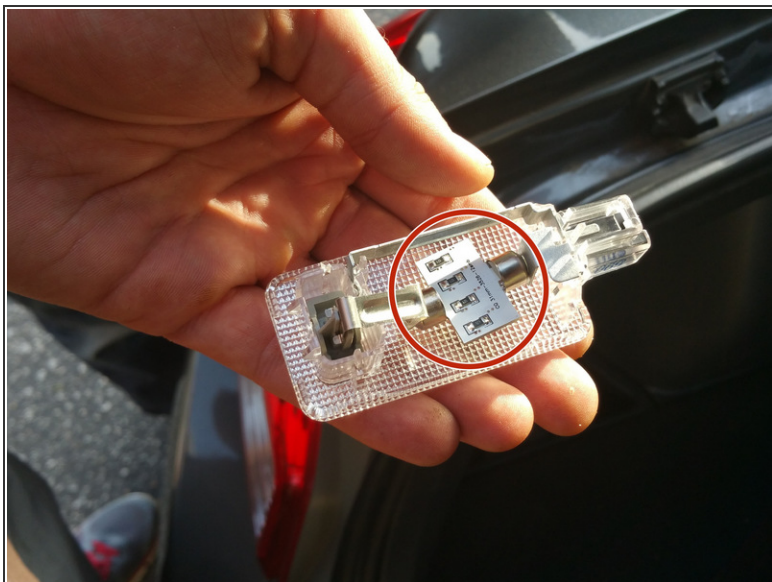

- Remove the lighting unit from the plastic header by pressing inward on the side tabs and pulling outward.

Step 3

- Remove back plate and switch from the unit to reveal the LED bulb.

Step 4

- Remove the LED from the casing by pulling upwards.
- ⓘ When inserting the replacement, take note of the direction and polarity of the unit.

To reassemble your device, follow these instructions in reverse order.
